## /WORK EXPERIENCE

### QA automation

#### Getronics

11/2024 - Present

QA Automation

##### Achievements/Tasks

- Software testing skills and experience Test automation: Cypress and Playwright for end-to-end test automation.
- Test execution: Performing manual and automated test cases for quality assurance.
- Reporting: Creation of test reports and error management with Jira.
- BDD: Implementation of collaborative BDD strategies using Cucumber.
- Performance testing: JMeter knowledge for load and stress testing.
- Database verification: Data integrity verification via VPN.
- API testing: Postman for API validation and backend integration.

### Frontend development

#### Igrowker

09/2024 - 11/2024

##### Achievements/Tasks

- I developed an MVP for a rural banking application as part of a technology training program, focusing on user-friendly interfaces and responsive web design. I built and optimized key components using React, TypeScript and JavaScript, adhering to industry best practices.
- Collaborated in an agile environment, contributing to frontend architecture and improving development workflows.
- Gained hands-on experience applying modern frontend development methodologies to real-world banking solutions.

### QA Tester

#### Xcapit

02/2023 - 05/2024

córdoba argentina

QA/QC

##### Achievements/Task

- API Testing (Postman, Insomnia), simulating requests with MITM and Proxyman, debugging in Firebase, verifying databases using VPN, managing APKs and emulators in Android Studio, creating reports in Jira, and executing tests (smoke, regression, sanity, E2E, integration, black-box, white-box). Participation in Figma, automatic testing Selenium with Python and Appium, use of RTM.
